

Manual Lead Harvesting

First, go to extract.sftwebinars.info and download the free **email extractor lite** tool, and keep the program open.

Next, go to www.google.com and click **Advanced Search**:

Type the name of the MLM company you want to search next to “all these words”, then type an email extension for “this exact wording or phrase”, and change the “results per page” to 100, then click Advanced Search:

Another example of searching would allow you to get addresses from a specific website or domain.

herbalife "gmail com" site:youtube.com

Find web pages that have...

all these words:

this exact wording or phrase: [tip](#)

one or more of these words: OR OR [tip](#)

But don't show pages that have...

any of these unwanted words: [tip](#)

Need more tools?

Results per page:

Language:

File type:

Search within a site or domain: 
(e.g. youtube.com, .edu)

Next, highlight the ENTIRE page (Ctrl A) and copy the highlighted information (Ctrl C)

Open the **Email Extractor Lite** and paste (Ctrl V) the information into the **Input Window**, select **New Line** under the "separator" dropdown, then click **Extract**. (you may have to allow blocked content on your browser for the program to work)

All the addresses that were in that list of 100 ads will show up in the Output window. Click **Copy Output**, and open an Excel file to paste into.

Go back to Google and click the **Next** page and repeat.

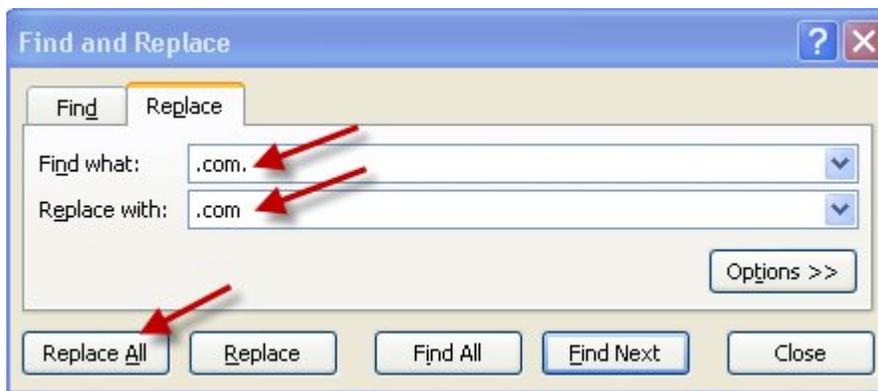

Herbalife "gmail.com" Search

Click **Reset** on the extractor and paste the new list in the Input Window and repeat.

When you have finished all the pages, go back to Google's **Advanced Search** and type in a new email extension (yahoo.com, comcast.net, etc), and repeat the same process. There is a list of email addresses and domains you can search for on the last page of this document. You'll get a lot of leads this way for each business you harvest, without having to own harvesting software.

Once you have your entire list in excel you need to clean up the list. Highlight the column then click Find/Replace. Find **.com.** and replace with **.com** (there are usually extra dots on a lot of the emails).

You can also find **.gov** and **.org** and replace with a blank space and it will invalidate the email, so the mailer program won't send to those addresses. Next, remove the duplicates and save your list by the Title of the biz you were harvesting.
